Taluka

LGD Services

1. Web Service to get LGD of Maharashtra State

<http://115.124.105.220/API/GetState>

Purpose of the web service	To return list of State
URL	http://115.124.105.220/API/GetState
Method	POST
Expected Output	1. State code 2. State English Name 3. State Local Name

Sample Screenshot (Using Postman) JSON format

The screenshot displays a Postman interface for a POST request to the URL `http://115.124.105.220/API/GetState`. The request is configured with the method `POST` and the same URL. The response is shown in the `Body` tab, indicating a status of `200 OK` with a response time of `357 ms` and a size of `650 B`. The JSON response is formatted as follows:

```
1 {
2   "statecode": "27",
3   "statenameenglish": "Maharashtra",
4   "statelocalname": "महाराष्ट्र"
5 }
6
7
```

2. Web Service to get LGD List of all Districts in Maharashtra

<http://115.124.105.220/API/GetAllDistricts>

Purpose of the web service	To return list of Districts
URL	http://115.124.105.220/API/GetAllDistricts
Method	POST
Expected Output	1. District code 2. District English Name 3. District Local Name

Sample Screenshot (Using Postman) JSON format

The screenshot displays a Postman interface for a POST request to the URL `http://115.124.105.220/API/GetAllDistricts`. The request is configured with the method `POST` and the same URL. The response is shown in the 'Body' tab, displaying a JSON array of three district objects. The status is `200 OK`, with a response time of `329 ms` and a size of `5.96 KB`.

Query Params

KEY	VALUE	DESCRIPTION

14    "villagelocalname": "अंबड"
15  },
16 }
```

5. Web Service to get List of all Local Bodies in Maharashtra

<http://115.124.105.220/API/GetAllLocalBodies>

Purpose of the web service	To return list of Local Bodies
URL	http://115.124.105.220/API/GetAllLocalBodies
Method	POST
Expected Output	1. District code 2. Taluka code 3. Village code 4. LocalBody English Name 5. LocalBody Local Name 6. LocalBody Type

Sample Screenshot (Using Postman) JSON format

The screenshot displays a Postman interface for a POST request to the URL `http://115.124.105.220/API/GetAllLocalBodies`. The request is in the 'Send' state. Below the request details, the 'Body' tab is selected, showing a JSON response in 'Pretty' format. The response status is 200 OK, with a response time of 753 ms and a size of 109.38 KB. The JSON data is as follows:

```
{
  "districtcode": "466",
  "subdistrictcode": "0000",
  "villagecode": "277285",
  "localbodynameenglish": "Ahmednagar (Cb)",
  "localbodylocalname": "अहमदनगर (CB)",
  "localbodytype": "B"
},
{
  "districtcode": "466",
  "subdistrictcode": "4201",
  "villagecode": "275728",
  "localbodynameenglish": "Akole (No)",
  "localbodylocalname": "अकोले (NP)",
  "localbodytype": "B"
}
```

6. Web Service to get List of Talukas of Given District in Maharashtra

<http://115.124.105.220/API/GetTalukasOfDistrict>

Purpose of the web service	To return list of Talukas of Given District
URL	http://115.124.105.220/API/GetTalukasOfDistrict
Method	POST
Input Parameters	1. distcode
Expected Output	1. District code 2. Taluka code 3. Taluka English Name 4. Taluka Local Name

Sample Screenshot (Using Postman) JSON format

http://115.124.105.220/API/GetTalukasOfDistrict?distcode=466

POST http://115.124.105.220/API/GetTalukasOfDistrict?distcode=466

Query Params

KEY	VALUE	DESCRIPTION
distcode	466	

Body

Status: 200 OK Time: 441 ms Size: 3.15 KB

```
1 {
2   {
3     "districtcode": "466",
4     "subdistrictcode": "4201",
5     "subdistrictnameenglish": "Akole",
6     "subdistrictlocalname": "अकोले"
7   },
8   {
9     "districtcode": "466",

13  },
14  {
15    "districtcode": "466",
16    "subdistrictcode": "4203"
```

7. Web Service to get List of Villages of Given District in Maharashtra

<http://115.124.105.220/API/GetVillagesOfDistrict>

Purpose of the web service	To return list of Villages of Given District
URL	http://115.124.105.220/API/GetVillagesOfDistrict
Method	POST
Input Parameters	1. distcode
Expected Output	1. District code 2. Taluka code 3. Village Code 4. Village English Name 5. Village Local Name

Sample Screenshot (Using Postman) JSON format

The screenshot shows a Postman interface for a POST request to the API endpoint `http://115.124.105.220/API/GetVillagesOfDistrict?distcode=466`. The request is successful with a status of 200 OK, a time of 620 ms, and a size of 374.25 KB. The response is a JSON array of two village objects.

Query Params

KEY	VALUE	DESCRIPTION
distcode	466	
Key	Value	Description

Body

```
{
  "districtcode": "466",
  "subdistrictcode": "4291",
  "villagecode": "657187 ",
  "villagenameenglish": "Khadki Bk.",
  "villagelocalname": "खडकी बुद्रुक"
},
{
  "districtcode": "466",
  "subdistrictcode": "4291",
  "villagecode": "657291 ",
  "villagenameenglish": "Pisewadi",
  "villagelocalname": "पिसेवाडी"
}
```

8. Web Service to get List of Villages of Given District & Taluka in Maharashtra

<http://115.124.105.220/API/GetVillagesOfDistrictAndTaluka>

Purpose of the web service	To return list of Villages of Given District and Taluka
URL	http://115.124.105.220/API/GetVillagesOfDistrictAndTaluka
Method	POST
Input Parameters	2. distcode 3. talukacode
Expected Output	6. District code 7. Taluka code 8. Village Code 9. Village English Name 10. Village Local Name

Sample Screenshot (Using Postman) JSON format

The screenshot shows a Postman interface for a POST request to the URL `http://115.124.105.220/API/GetVillagesOfDistrictAndTaluka?distcode=466&talukacode=4201`. The request parameters are `distcode=466` and `talukacode=4201`. The response status is 200 OK, and the response body is a JSON array of two village objects.

```
{
  "districtcode": "466",
  "subdistrictcode": "4201",
  "villagecode": "557219",
  "villagenameenglish": "Dongargaon",
  "villagelocalname": "डोंगरगाव"
},
{
  "districtcode": "466",
  "subdistrictcode": "4201",
  "villagecode": "557236",
  "villagenameenglish": "Takali",
  "villagelocalname": "टाकली"
}
```

9. Web Service to get List of Local Bodies of Given District in Maharashtra

<http://115.124.105.220/API/GetLocalBodiesOfDistrict>

Purpose of the web service	To return list of Local Bodies of Given District
URL	http://115.124.105.220/API/GetLocalBodiesOfDistrict
Method	POST
Input Parameters	1. distcode
Expected Output	1. District code 2. Taluka code 3. Village Code 4. LocalBody English Name 5. LocalBody Local Name 6. LocalBody Type

Sample Screenshot (Using Postman) JSON format

http://115.124.105.220/API/GetLocalBodiesOfDistrict?distcode=466

ePCIS Services

2.1 Web Service to get ePCIS List of Talukas of a given LGD District

<http://115.124.105.220/API/epcisService>

Purpose of the web service	To return list of Villages of Given District and Taluka
URL	http://115.124.105.220/API/epcisService
Method	POST
Input Parameters	1. method (getTaluka) 2. distcode
Expected Output	1. Taluka code 2. Taluka English Name 3. Taluka Local Name

Note :- for Input Parameter distcode will be LGD District Code

Sample Screenshot (Using Postman) JSON format

The screenshot displays a Postman interface for a POST request to the URL `http://115.124.105.220/API/epcisService?distcode=466&method=getTaluka`. The request parameters are set as follows:

KEY	VALUE	DESCRIPTION
☒ distcode	466	
☒ method	getTaluka	
Key	Value	Description

The response is shown in the 'Body' tab, displaying a JSON array of three objects, each representing a taluka:

```
1 {
2   {
3     "epcis_taluka_code": "01",
4     "epcis_english_name": "Akole",
5     "epcis_local_name": "अकोले"
6   },
7   {
8     "epcis_taluka_code": "13",
9     "epcis_english_name": "Karjat",
10    "epcis_local_name": "करंजत"
11  },
12  {
13    "epcis_taluka_code": "02",
14    "epcis_english_name": "Sangamner",
15    "epcis_local_name": "संगमनेर"
16  },
17  }
```

The status bar at the bottom indicates a successful response with status 200 OK, a response time of 329 ms, and a size of 2.62 KB.

2.2 Web Service to get ePCIS List of Villages of a given LGD District & ePCIS Taluka

<http://115.124.105.220/API/epcisService>

Purpose of the web service	To return list of Villages of Given District and Taluka
URL	http://115.124.105.220/API/epcisService
Method	POST
Input Parameters	1. method (getVillage) 2. distcode (LGD code) 3. talukacode (ePCIS code)
Expected Output	1. District Code 2. Taluka code 3. Village English Name 4. Village Local Name

Note :- for Input Parameter distcode will be LGD District Code and taluka code will be epcis taluka code

Sample Screenshot (Using Postman) JSON format

The screenshot shows a Postman interface for a POST request to `http://115.124.105.220/API/epcisService?distcode=466&method=getVillage&talukacode=03`. The request is configured with the following query parameters:

KEY	VALUE	DESCRIPTION
☒ distcode	466	
☒ method	getVillage	
☒ talukacode	03	
Key	Value	Description

The screenshot shows the JSON response of the POST request. The status is 200 OK, and the response is in JSON format. The JSON data is as follows:

```
1 {
2   {
3     "epcis_vcode": null,
4     "epcis_english_name": "Anjanapur",
5     "epcis_local_name": "अंजनापुर"
6   },
7   {
8     "epcis_vcode": null,
9     "epcis_english_name": "Takali",
10    "epcis_local_name": "टाकली"
11  },
12  {
13    "epcis_vcode": null,
14    "epcis_english_name": "Wari",
15    "epcis_local_name": "वारी"
16  },
17 }
```

eFerfar Services

3.1 Web Service to get eFerfar List of Talukas of given LGD District

<http://115.124.105.220/API/eferfarService>

Purpose of the web service	To return list of Villages of Given District and Taluka
URL	http://115.124.105.220/API/eferfarService
Method	POST
Input Parameters	1. method (getTaluka) 2. distcode (LGD Code)
Expected Output	1. Taluka code 2. Taluka English Name 3. Taluka Local Name

Note :- for Input Parameter distcode will be LGD District Code

Sample Screenshot (Using Postman) JSON format

The screenshot displays a Postman interface for a POST request to the URL `http://115.124.105.220/API/eferfarService?distcode=466&method=getTaluka`. The request parameters are defined in the Query Params tab:

KEY	VALUE	DESCRIPTION
☒ distcode	466	
☒ method	getTaluka	
☐ talukacode	03	

The response is shown in the Body tab, formatted as JSON:

```
[
  {
    "eferfar_taluka_code": "01",
    "eferfar_english_name": "Akoila",
    "eferfar_local_name": "अकीले"
  },
  {
    "eferfar_taluka_code": "02",
    "eferfar_english_name": "Sangamner",
    "eferfar_local_name": "संगमनेर"
  },
  {
    "eferfar_taluka_code": "03",
    "eferfar_english_name": "Kopargaoon",
    "eferfar_local_name": "कोपरगाव"
  }
]
```

Additional details from the screenshot include a status of 200 OK, a response time of 324 ms, and a size of 2.74 KB.

3.2 Web Service to get eFerfar List of Villages of a given LGD District and eFerfar Taluka

<http://115.124.105.220/API/eferfarService>

Purpose of the web service	To return list of Villages of Given District and Taluka
URL	http://115.124.105.220/API/eferfarService
Method	POST
Input Parameters	1. Method (getVillage) 2. Distcode (LGD code) 3. Talukacode (eFerfar code)
Expected Output	1. District Code 2. Taluka code 3. Village English Name 4. Village Local Name

Note :- for Input Parameter distcode will be LGD District Code and taluka code will be eferfar taluka code

Sample Screenshot (Using Postman) JSON format

The screenshot displays a Postman interface for a POST request to the URL `http://115.124.105.220/API/eferfarService?distcode=466&method=getVillage&talukacode=03`. The request parameters are set as follows:

KEY	VALUE	DESCRIPTION
☒ distcode	466	
☒ method	getVillage	
☒ talukacode	03	

The response is shown in JSON format, indicating a successful status (200 OK) with a response time of 377 ms and a size of 15.38 KB. The JSON data is as follows:

```
1 {
2   {
3     "eferfar_village_code": "272600030323490000",
4     "eferfar_english_name": "Anchalgaon",
5     "eferfar_local_name": "अंचलगाव"
6   },
7   {
8     "eferfar_village_code": "272600030323390000",
9     "eferfar_english_name": "Chasnali",
10    "eferfar_local_name": "चासनली"
11  },
12  {
13    "eferfar_village_code": "272600030323840000",
14    "eferfar_english_name": "Dauch Kh.",
15    "eferfar_local_name": "डाउच खुर्द"
16  },
17 }
```

Census 2011 Services

4.1 Web Service to get Census 2011 List of Taluka of a given LGD District

<http://115.124.105.220/API/c2011Service>

Purpose of the web service	To return list of Villages of Given District and Taluka
URL	http://115.124.105.220/API/c2011Service
Method	POST
Input Parameters	1. Method (getTaluka) 2. Distcode (LGD Code)
Expected Output	1. Taluka code 2. Taluka English Name 3. Taluka Local Name

Note :- for Input Parameter distcode will be LGD District Code

Sample Screenshot (Using Postman) JSON format

The screenshot displays a Postman interface for a POST request to the URL `http://115.124.105.220/API/c2011Service?distcode=466&method=getTaluka`. The request parameters are set as follows:

KEY	VALUE	DESCRIPTION
☒ distcode	466	
☒ method	getTaluka	
☐ talukacode	03	

The response is shown in JSON format, indicating a successful status (200 OK) with a response time of 325 ms and a size of 2.67 KB. The JSON data is as follows:

```
1 [
2   {
3     "c2011_taluka_code": "04208",
4     "c2011_english_name": "Pathardi",
5     "c2011_local_name": "पाथर्डी"
6   },
7   {
8     "c2011_taluka_code": "04206",
9     "c2011_english_name": "Nevasa",
10    "c2011_local_name": "नेवसा"
11  },
12  {
13    "c2011_taluka_code": "04212",
14    "c2011_english_name": "Shrigonda",
15    "c2011_local_name": "श्रीगोंदा"
16  },
17  ]
```

4.2 Web Service to get Census 2011 List of Villages of a given LGD District and Census 2011 Taluka

<http://115.124.105.220/API/c2011Service>

Purpose of the web service	To return list of Villages of Given District and Taluka
URL	http://115.124.105.220/API/c2011Service
Method	POST
Input Parameters	1. method (getVillage) 2. distcode (LGD Code) 3. talukacode (census2011 code)
Expected Output	1. District Code 2. Taluka code 3. Village English Name 4. Village Local Name

Note :- for Input Parameter distcode will be LGD District Code and taluka code will be c2011 taluka code

Sample Screenshot (Using Postman) JSON format

The screenshot displays a Postman interface for a POST request to the URL `http://115.124.105.220/API/c2011Service?distcode=466&method=getVillage&talukacode=04206`. The request parameters are set as follows:

KEY	VALUE	DESCRIPTION
distcode	466	
method	getVillage	
talukacode	04206	

The response is shown in JSON format, indicating a status of 200 OK. The JSON data is as follows:

```
{
  "c2011_dist_code": "522",
  "c2011_taluka_code": "04206",
  "c2011_village_code": "557691",
